# What can we help you find?

Find practical guidance for authoring, reviewing, governing, and publishing enterprise documentation through a controlled Docs-as-Code workflow.

## Documentation workflow

[Install the toolchain](#)

[Author structured content](#)

[Run Vale and AI reviews](#)

[Resolve content conflicts](#)

[Review security risks](#)

[Publish approved outputs](#)

## Knowledge resources

[Browse by documentation tag](#)

[Use the glossary](#)

[Browse all guides](#)

[Download PDF files](#)

[Download Word files](#)

[Review the governance workflow](#)

# Explore the documentation

Use these entry points to move from initial setup to governed publication.

01

## Get started

Set up Markdown, MkDocs, GitHub Actions, Vale, and document exports.

02

## Review content

Understand how deterministic checks and contextual AI review work together.

03

## Govern knowledge

Organize content with approved terminology, tags, ownership, and human authority.

04

## Deliver outputs

Access generated PDF and DOCX files for every published page.

## Human approval remains the final authority

Automated checks identify deviations and risks. A qualified reviewer makes the final editorial and technical decision before publication.
